DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group II, Claims 8-14, 22-28, 32 and 33, in Paper No. 7 is acknowledged.

The Restriction mailed on or about 22nd July 2003 has been carefully reviewed and is held to be proper. Moreover Applicant did not distinctly and specifically point out any error in the Restriction Requirement. Accordingly, Claims 1-7, 15-21 and 29-31 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected Group, there being no allowable generic or linking claim.

The Restriction filed on or about 22nd July 2003 is hereby **made Final**.

Applicant is required to cancel these nonelected claims (1-7, 15-21 and 29-31) or take other appropriate action.

An Office Action on the merits of Claims 8-14, 22-28, 32 and 33 now follows.

Title

2. The following title is suggested: "A Method For Inserting A Coil Into A Dynamoelectric Machine Component".

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 8-13, 22-27, 32 and 33 are rejected under 35 U.S.C. 102(b) as being anticipated by Fooyontphanich et al (US 4,205,429) hereinafter '429.

As applied to claims 8, 22 and 32, the '429 teaches a method of inserting prepared or pre-wound coils (Cf. column 8, lines 18-22, lines 45+) into dynamoelectric machine stator, comprising:

- placing the coils into an inserting tool or mechanism (Cf. Fig. 2, element 33; column 4, line 41+);
- inserting a portion of the stretch coil through the bore (Cf. Fig. 1, element 21) of the magnetic core (Cf. Fig. 2, element 15; column 5, lines 17-22);

Art Unit: 3729

- pushing the stretch portion into the slot in a circumferential direction with respect to the axis (Cf. column 5, line 66 – column 6, line 2).

As applied to claims 9 and 23, the '429 teaches the pressing of the stretch portion into the bore (Cf. Fig. 1, element 21) of the magnetic core (Cf. Fig. 2, element 15; column 5, lines 17-22) and the coil guiding with deflecting pins or studs (Cf. column 10, lines 1-5).

As applied to claims 10, 11, 24 and 25, the '429 teaches the pressing of the coil portion in a desired form (Cf. Fig. 2, element 35).

As applied to claims 12, 13, 26 and 27, the '429 teaches that the coils are pushed into the bore for insertion by moveable blade (Cf. Fig. 2, elements 57 & 59).

As applied to claim 33, the '429 teaches the prepared coil windings outside of the stator core or machine component (Cf. Fig. 1, element 31; column 4, lines 41-56).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 3729

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 14 and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over the '429.

As applied to claims 14 and 28, the '973 teaches the claimed invention except for terminating the coil leads.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to terminate the coil leads in order to feed power to the coils and generate magnetic flux for the dynamoelectric machine.
